

Summon Library Tutorial 1 – Transcript, June 2014

Let's take a look at how you can use the Online Library to find books and articles.

Simply type a topic into the default search box in the Online Library on the MyTLC homepage. This will search a database called Summon. Summon is what we call a general research database because it covers any topic that you can think of. The Online Library also has access to more discipline-specific databases and you might want to use one of those if you are doing more exhaustive research or if you would like to find more than what seems to be available through Summon. But Summon is always a good starting point, so for now, let's just see how far we can get with it.

The screenshot displays the MyTLC homepage with a navigation bar at the top containing links for Home, My Approvals, My Students, E-Ticket, My Career Center, and My Resources. Below the navigation bar are four main content areas:

- Online Classroom:** Contains links for My TLC Courses, CourseNet, CDAD (Course Delivery System), and a special access link for CNSSS for Faculty in an Administrative role.
- MyTLC News:** Features an article titled "Early Course Access" with a photo of a student at a laptop and a text block explaining the new access policy.
- Quickstart Help:** Includes a video player icon and text directing users to help with navigating the TLC Portal, with a link to download a PDF version.
- Online Library:** This section is highlighted with a red box. It features a heading "BEGIN YOUR LIBRARY RESEARCH HERE" with a help icon, a search prompt "Find Books and Journal / Magazine / Newspaper articles here!", a search input field containing the text "emergency management earthquakes", a "Search" button, and a button for "ADDITIONAL LIBRARY RESOURCES".

Let's say I'm writing a paper on emergency management and earthquakes. I'm going to enter my search terms, "emergency management earthquakes," into the

search box. Summon brings up a big set of results. This list includes over 200,000 results that contain the words "emergency management earthquakes." That's a lot!

The screenshot shows the Trident University logo in the top left and navigation links (Help, About, Feedback) in the top right. A search bar contains the text "emergency management earthquakes" with a "Search" button and a link to "Advanced Search". Below the search bar are radio buttons for "Keep search refinements" (selected) and "New search". The search results header states "Search Results: Your search for emergency management earthquakes returned 247,873 results", with the number "247,873" highlighted in a red box and a red arrow pointing to it. On the left is a "Refine your search" sidebar with checkboxes for "Items with full text online", "Limit to articles from scholarly publications, including peer-review", "Exclude Newspaper Articles", and "Add results beyond your library's collection". Below this is a "Content Type" section with a dropdown arrow and a list of content types: "Any" (checked), "Book / eBook (185,801)", "Newspaper Article (38,411)", "Journal Article (12,839)", "Magazine Article (4,017)", and "Trade Publication Article (3,269)". The main results area shows two items. The first is titled "Earthquake" by James A. Carlson and Robert E. Simmons, from the ASHRAE Journal, ISSN 0001-2491, 04/2011, Volume 53, Issue 4, p. 44. The abstract describes devastating earthquakes worldwide, mentioning a 9.0 earthquake in Japan on March 11. The second item is titled "COMMUNITY EMERGENCY RESPONSE TEAM EARTHQUAKE DRILL AT EMERGENCY MANAGEMENT" from the US Fed News Service, dated 05/04/2009. The abstract mentions a news release from Springfield, Mo., on April 30, regarding an earthquake drill at the Springfield-Greene County Office of Emergency Management.

In the list you can see basic author and title information. But if I only need a handful of really good articles, how do I pick just a few of these? We can use some of the tools in Summon to help narrow this results list.

To start, let's make sure that we're only looking at results that will have the kind of information that I want. In this case, I'm only interested in peer-reviewed, scholarly articles. In the upper left corner of your screen, Summon gives you a check box to limit your results to articles only from scholarly, peer-reviewed publications.

 Journal Article:

Once I click that check box, Summon updates my results list and throws out anything that's not an article from a scholarly journal. That still leaves me with 10,000 results.

After reviewing a few of these results, I see that many of them are not really what I am looking for. The first few are very general; this one is about social media and this one is about engineering. To help focus the list, I can use the subject terms listed on the left-hand side.

The Subject Terms list shows key terms representing what the 10,000 articles in my set of results are about. The most common subjects represented by all these articles are visible right away, but I can see all of the subject terms available by clicking "more..." I can pick out one or a few that match exactly what I'm looking for. Some are really general, such as "studies" or "article" so I'm not going to worry about those. I'd rather find one that's more specific to what I want. Let me scroll down.

As I'm reviewing the article results and these subjects, I realize that what I really want is to research this topic from a "health" perspective so I'm going to choose the subject term, "health." I'm going to include that by checking the box in the "Include" column. If I saw something that I specifically wanted to exclude, I could also choose it from the "Exclude" column. Now I'm going to click "continue" and see what happens.

Using the Subject Terms check boxes has significantly narrowed my results. Now I'm down to just over 200 results, and they're all related to health and emergency management and earthquakes. That's a lot better than the initial list of 200,000!

I'm also going to use this date range tool on the left side to limit to anything published since 2010. I can type in specific years or use this slider to drag to 2010 and click "update."
